-------- SAGA is a comprehensive software application that enables you to evaluate geographical information and customize the visualization in several ways, as well as resort to some handy methods and algorithms. Given its wide range of advanced settings, it is solely geared toward experienced users. Quick setup and plain-looking UI The installation procedure does not take a long time to finish, and it doesn't require special input. As far as the interface goes, SAGA opts for a classical-looking interface based on a single window split into multiple panels. It is not visually appealing, yet easy to navigate. Explore tool libraries and tinker with settings You can open SAGE projects or tool libraries, grids, ESRI Shape files, tables (TXT, CSV, DBF format) along with point clouds. It is possible to navigate libraries with tools for the climate, garden, grid, imagery, import and export, projection, reports, shapes, simulation, spatial and geostatistics, TIN, table, terrain analysis, tool chains, and visualization, in order to configure each and every settings to achieve the desired effects. Thanks to an Explorer-based folder structure, you can also navigate disk directories for the file system, ODBC and PostgreSQL sources. After executing commands, you can view log details and information about errors (if any). Evaluation and conclusion No errors popped up in our tests, and the program did not hang or crash. It has a good response time and minimal impact on computer performance, thanks to the fact that it needs a low quantity of CPU and memory to work properly. Those who want to bypass the installer and run the app directly from a pen drive may resort to its portable counterpart, called SAGA Portable. To sum it up, SAGA features a rich set of options and commands for analyzing geographical data. Mapzen Mapzen is an up-and-coming company. Founded in 2008 by top-notch engineers from Google, Mapzen specializes in building free and open-source data tools for developers, designers, and data scientists who are interested in location and mapping technologies. The technology used by Mapzen is known as Mapbox, a local data service that uses the web as an alternative to databases for storing, updating, and querying a large volume of geo-spatial data. In late-2011, Mapzen's service caught the attention of over 50,000 developers and was used by 2.7% of the web. Currently, Mapzen's team is located in San Francisco, California, and maintains a number of open-source tools available for free at their website. These tools are: ArcGIS for Server Software ArcGIS for Server (ArcGIS-S) is a web-based GIS application that consists of the main server and client software. System Requirements For SAGA:

The following are minimum system requirements for the game. However, we have seen it run with as little as 1GB of RAM. The higher you go the more it requires. OS: 64-bit Windows 7 or later (32-bit Windows can run but with the lowest graphics settings) Processor: 2 GHz dual core or equivalent RAM: 2 GB (4 GB recommended) GPU: GeForce GTX 660 or better For most systems above this requirements are met, but we have seen people on high end systems with the highest graphics settings
